NegoAI

Your community's voice, negotiating in every Indian language.

VOICE-FIRST . INDIC-NATIVE

AI voice negotiator for apartment community group buying

Solution Pitch | Gnani.ai AI Challenge | Team: Harshith R

THE PROBLEM

Apartment communities have real buying power, but almost never use it. Every household buys alone at retail prices, and organising hundreds of residents over WhatsApp groups and phone calls is slow and messy. Negotiating takes hours of phone time, and vendors speak many languages and dialects, so most deals are simply **accepted, never negotiated**.

OUR SOLUTION

NegoAI pools what a community wants to buy, then an AI voice agent negotiates with vendors on its behalf, over a real phone call or straight from the browser microphone, in the language the vendor is comfortable with. Residents get a clear outcome to approve. No haggling, no chasing, no language barrier.

HOW IT WORKS

1
Pool demand
Residents list what they need. NegoAI groups it into one bulk requirement.

2
Negotiate by voice
The agent talks to the vendor by phone call or browser mic and bargains on price and terms.

3
Speak every language
Understands and replies in all major Indian languages, so nobody is left out.

4
Report the deal
Residents receive the final terms in plain words, ready to approve.

WHY VOICE, WHY INDIAN LANGUAGES, WHY NOW

In India, business runs on phone calls and regional languages, not forms and English-only apps. Voice removes the barrier for residents and vendors alike. Speech AI that understands real Indian speech, accents and code-switching is finally good enough for live negotiation, and group buying is the perfect use: **high demand, low bargaining power, and nobody with the time to negotiate**. This is exactly the real-world, multilingual problem that Gnani.ai's voice AI is built for.

WHO BENEFITS

Residents
Better prices through collective power, without spending time bargaining.

Vendors
One large, predictable order instead of many small scattered ones.

RWAs / community admins
A transparent, repeatable buying process in place of chat-group chaos.

TECH STACK

React web app | **FastAPI** backend | real-time voice pipeline (speech-to-text, negotiation agent, text-to-speech) | browser microphone and phone-call modes | deployed on **Vercel**.

STATUS AND NEXT STEPS

Working today
Live web app with a multilingual voice negotiation agent, usable through the browser mic and phone calls.

Next
Multi-vendor quote comparison, WhatsApp approvals for residents, a community savings dashboard, and onboarding for more RWAs.
